

COMPLIANCE

Reporting: Accident & Incident Reporting

A valuable tool in keeping
crew and vessels safe

A digitised approach to putting health and safety first

OneOcean Compliance enables ship and shoreside teams to control risk anywhere in the world, especially when situations change. It does this by providing uninterrupted access to a trusted, up-to-date regulatory database of live and archived official nautical documents. Even when no internet is available.

The Accident & Incident Reporting module of OneOcean Compliance allows for the simple creation and completion of incident reports within your Safety Management System (SMS). It saves time, minimises the risk of non-compliance and helps ensure accuracy when reporting incidents.

Simplified safety management and reporting

Safety and risk reduction are at the forefront of the minds of all mariners, fleet managers, QHSE officers, and ship owners.

The Accident & Incident Reporting module allows for the simple creation and completion of incidents reports within your SMS, enabling your organisation to implement and enforce stringent safety management.

Highly flexible, you can create and configure incident forms and reporting to match the needs of your operations. All data and statistics are shown through the Platform's comprehensive dashboard, which is also accessible via mobile app to enable both online and offline incident reporting. All reports and forms can then be exported as PDF or Excel files.

The workflow can be tailored and integrated with the task scheduler, improving the efficiency of operational processes. To support compliance, access and user privileges can also be set, helping to protect the flow of information.

This module reduces administrative burden and minimises the risk of non-compliance, with all accident and incident related information is consolidated in one place.

Configurable reports include:

- Action summary
- Root cause analysis, such as M-SCAT
- Incident summary
- Status
- Task
- MOC
- Loss
- Accident
- Near miss
- Non-conformity
- Corrective action
- Permits to work
- Safety meeting minutes

Benefits

Enforces stringent safety management

Saves time

Minimises non-compliance

Highly configurable to reflect operational processes

Enables on and offline incident reporting

Reports can be exported as PDF or Excel documents

Highlights

Simple creation of incidents reports in SMS

Configure any kind of report, including root cause analysis

All accident and incident information consolidated

Clear visual display of all data

Configurable access privileges support compliance

Accident & Incident Reporting

Take the complexity out of correctly reporting incidents with a digital-first approach.
