Enabling effective maritime management

OneOcean Manage simplifies fleet, ship, voyage, crew and document management, consolidating all data into one central, intuitive platform.

Simplify ship and crew management

Effective maritime management is key for safe, clean, efficient, and profitable voyages.

Different roles need different information to perform their jobs. Often this leads to the use of disparate sources to undertake this essential, yet labour intensive, task. This adds to the complexity, costs, and, ultimately, slows down processes.

OneOcean Manage draws together information into one intuitive platform. Streamlining the workflows needed to keep fleets secure and compliant, and helping your business run more efficiently.

OneOcean^{LR} Platform

Better decision-making. Onboard. Onshore. Online.

The OneOcean^{LR} Platform is a comprehensive portfolio of tools providing industry-leading actionable intelligence to maritime professionals. Because it's built with simplicity and flexibility at heart, different components can be added and removed easily and with no downtime.

The Platform is built on four key areas: Comply, Manage, Perform and Integrate.

Simpler access to the right information

OneOcean Manage is an easy-to-use system, available as an off-the-shelf or highly customised solution, for **Ship Management** and **Crew Management**.

It simplifies fleet, ship, voyage, crew, and document management by providing real-time information and instructions to the right people, aligning them around one central platform.

Data visualisation and analytics give better context to gain new perspectives and insights.

It gives shoreside teams visibility of onboard activities and facilitates ship-shore information exchange. A particular challenge when vessels don't have consistent internet access.
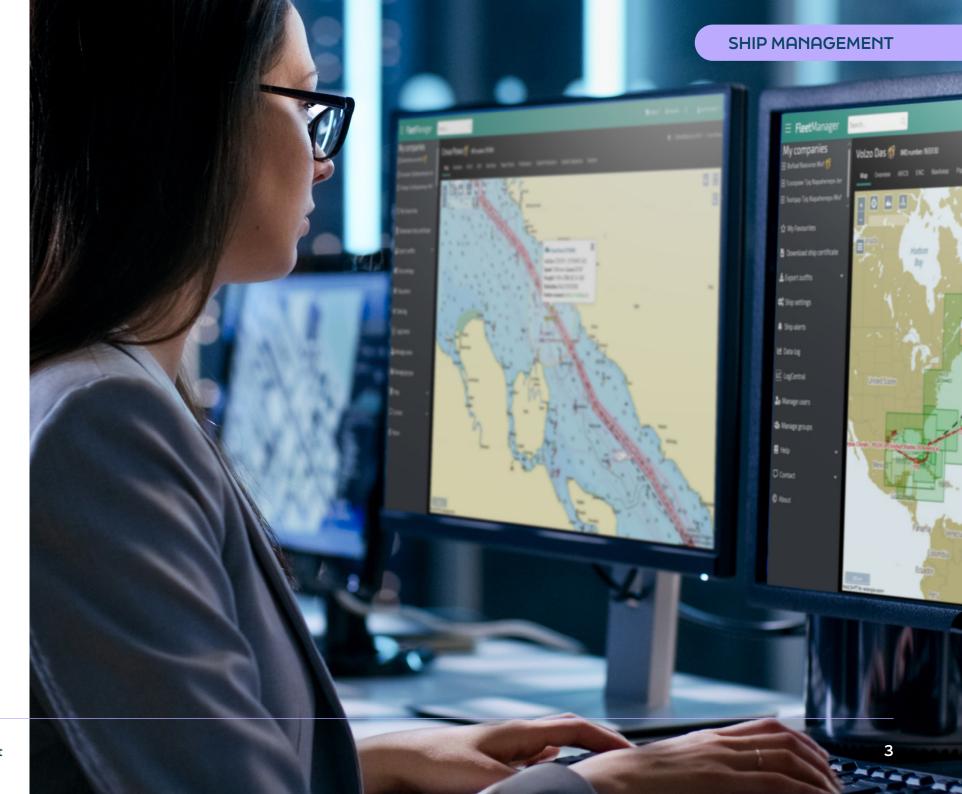

Stay informed.
Stay connected.

OneOcean Ship Management covers technical management and operations, and it is a widely trusted, automatically-updated Safety Management System (SMS). As a SMS, it supports document, certificate, and QHSE management.

The functionality extends to maintenance, purchasing, scheduling, charter management, and the integration of external stakeholders via a partner portal. Its intuitive interface improves clarity and control. In an emergency, detailed instructions can be provided to a ship's crew, so they immediately have the guidance they need.

Access to consolidated data streamlines the inspection and audit process for fast root-cause analysis. And for convenience, forms and reporting can be completed and reviewed using a mobile device.

The solution is available off-the-shelf or as a customised solution set up according to your specific requirements. And because it's cloud-native, it's accessible anywhere, on any device.

Plug-and-play modules allow you to tailor the OneOcean Ship Management solution within the OneOcean[LR] Platform to meet the operational and compliance needs of your business.

Safety Management System (SMS)

Connect teams with the information they need to ensure compliance and safety via an intuitive interface. This includes detailed instructions on emergency protocols, so all parties are immediately aware of what steps to take in a critical situation. It also streamlines inspections and audits for fast root-cause analysis.

Technical Management

This brings together, prioritises, and coordinates different stakeholders internally and externally to deliver an optimal schedule of activities that includes bunker management, maintenance planning, fleet performance and certificate administration. All through one platform for seamless operations.

Operations

Consolidate the administration tasks and operations needed to successfully charter vessels and keep them secure. This module offers a complete approach to running your fleet and its charters, including contract data, the administration of schedules and visualisation of fleet movements, inspections and ports on voyage.

SMS includes:

Document Management

Replace inefficient and decentralised methods of document exchange and maintenance with one streamlined workflow. The Document Management module offers a digital approach to document management with information synchronised in real time.

QHSE

This intelligent digital framework facilitates the exchange of compliance documentation, giving your shoreside teams the oversight needed to promote a culture of safety and compliance. These modules are available with pre-set features or can be tailored to the unique process needs of your fleet.

Certificate Management

Store digital versions of all vessel and crew certifications in a single centralised location, giving crew and shore-based teams 24/7 access to this library of information.

Learn how

Helping your people perform at their best

OneOcean Crew Management enables the coordination of all crew-related procedures, including resource planning, document validation, work/rest hours, and payroll.

It connects departments and helps everyone onboard maintain high QHSE standards.

A self-service crew portal makes it easy for seafarers to manage their data, documents, and paperwork autonomously. This reduces the burden on managers. Digital archiving of circulars enables joining crew members to get themselves up to date easily.

Crew Planning & Payroll

Streamline the processing of employee information, encourage communication and enable better planning. The Crew Planning & Payroll module integrates across all departments for seamless management.

Crew Logistics

Book flights, arrange onboard accommodation and access important crew information, this module helps reduce the manual effort. And, with all information and resources connected in one place, enables you to respond quickly to sudden crew changes.

Crew Work Rest

Through the Platform you can easily plan, manage and report on crew's rest hours compliance. Or utilise the capabilities of ISF Watchkeeper.*

One solution – all your crewing needs covered
